

CLAIMS

I CLAIM:

1. A connection system for securing a pair of sunglasses to a pair of eyeglasses, said connection system comprising a pair of sunglasses having two lenses interconnected by a bridge portion,

a pair of eyeglasses having two lenses interconnected by a bridge portion, and

at least one of said bridge portion of said sunglasses and said bridge portion of said eyeglasses includes a pair of magnets for securing said sunglasses and said eyeglasses together, such that when coupled, due to the locations of said magnets said sunglasses and said eyeglasses are attached together.

2. The connection system as claimed in claim 1, wherein said magnets are embedded in said at least one of said bridge inner portion of said sunglasses and said bridge inner portion of said eyeglasses.

3. The connection system as claimed in claim 2, wherein said magnets are rectangular.

4. The connection system as claimed in claim 3, wherein said magnets have a height of 1.2 centimeters, a depth of 1.2 centimeters and a length of 4.3 centimeters.

5. The connection system as claimed in claim 3, wherein said magnets have a height of 1.2 centimeters, a depth of 1.5 centimeters and a length of 4.3 centimeters.

6. The connection system as claimed in claim 1, wherein said magnets are embedded in one of the bridge inner portion of the sunglasses and the bridge inner portion of the eyeglasses and the other of the bridge portion of the sunglasses and the bridge portion of the eyeglasses is made of metal.

7. The connection system as claimed in claim 1, wherein said magnets are embedded in the bridge inner portion of the sunglasses and the bridge inner portion of the eyeglasses.

8. The connection system as claimed in claim 7, wherein a face of said magnets in the bridge inner portion of the sunglasses is of an opposite polarity from a face of said magnets in the bridge inner portion of the eyeglasses and the embedded magnets in the bridge inner portions are concealed as a result of the mutual attraction of the opposite poles of the magnets in the bridge portions.

9. The connection system as claimed in claim 8, wherein a depth of the magnet in the bridge portion of the sunglasses is greater than a depth of the magnet in the bridge portion of the eyeglasses.

10. The connection system as claimed in claim 9, wherein a length of the magnet in the bridge portion of the sunglasses is equal to a length of the magnet in the bridge portion of the eyeglasses.

11. A connection system as claimed in claim 10, wherein a height of the magnet in the bridge portion of the sunglasses is equal to a height of the magnet in the bridge portion of the eyeglasses.
